Research Experience

Ph.D. Thesis: Mapping cerebro-cerebellar networks of the human brain during learning

[Github \[Link\]](#)

GRADUATE STUDENT RESEARCHER (2017-)

[University of California, Berkeley](#)

- Developed machine learning pipelines to predict cognitive function in the human cerebellum during learning, and tested patients with spinocerebellar ataxia on a series of cognitive tasks to assess cerebellar deficits. My work requires knowledge of both advanced statistics and computer programming (e.g., Python) to analyze high-dimensional and complex neural data.
- Led a team of 8 to design and collect 300 experimental hours of functional magnetic resonance imaging (fMRI) data (during COVID-19 pandemic).
- Co-wrote an R35 grant that received 5-year funding from the NIH. Managed an institutional review board (IRB) protocol for fMRI experiments.
- Created a widely adopted mentorship agreement for research assistants to ensure transparency and accountability in mentoring practices. Co-led a journal club for undergraduate research assistants, instructing them on the scientific method and appropriate methods and statistics.
- Mentored two undergraduate students in designing and writing up honors thesis projects. One student was awarded a *Swan prize* [link] for their work, and presented at a national conference. Prioritized recruitment of students from marginalized demographics.
