## Experience

### Thesis: Mapping cerebro-cerebellar networks of the human brain during learning

[Github \[Link\]](#)

UNIVERSITY OF CALIFORNIA, BERKELEY

Graduate Student Researcher (2017-)

- The aim of my thesis is to use *machine learning* to predict cognitive function across learning in the human cerebellum using *cortical features*.
- Led a team of 9 (3 Ph.D. students, 5 research assistants, 1 postbac student) to design and collect 300 experimental hours of fMRI and eye-tracking data.
- Developed *encoding models* to build an optimal model of *cerebro-cerebellar connectivity*, features were extracted by parcellating the human cerebral cortex and *feature selection* was performed with *L1 regularization*.
- Used *dimensionality reduction* (PCA, ICA), *clustering*, *regression*, *permutation tests* and other machine learning techniques to analyze *behavioral* and *eye-tracking* data to predict human *learning* performance on *movie-based* action prediction tasks.

### Thesis: Understanding the functional organization of the human cerebellum

[Paper \[Link\]](#)

WESTERN UNIVERSITY

Graduate Student Researcher

(2015-2017)

- My thesis used *machine learning* to map cognitive sub-domains of the human cerebellum.
- I designed and collected a 26-task fMRI experiment and used *semi non-negative matrix factorization* to generate a *novel functional map* of the human cerebellum.
- I used *feature-based encoding models* and *natural language processing* to assign cognitive labels (sourced from *cognitiveatlas.org*) to functional domains of the cerebellum.
- The rich dataset that I generated has been made publicly available on *openneuro.org* and has been downloaded by *hundreds of researchers*.

## Selected Projects

### SUITPy: Analysis and visualization of cerebellum imaging data

[Github \[Link\]](#)

2021

- Core developer of *SUITPy*, an open-source *python* toolbox based on a highly popular *MATLAB* toolbox. I improved *mapping* of brain data to 2D surface space and incorporated *brain atlases* from *open-source* repositories.

### Evaluating functional boundaries of the brain using a novel distance coefficient

[Paper \[Link\]](#)

2021

- Co-developed a novel *statistical metric* to evaluate the validity of *brain parcellations*, an advancement on *Homogeneity* and *Silhouette coefficients*. Evaluated metric on *open-source* brain data from *Human Connectome Project*.

## Low dimensional embedding of genetic gradients in the human cerebellum

[Paper \[Link\]](#)

2020

- Investigated *genetic gradients* in the *human cerebellum* using postmortem data from the *Allen Human Brain Atlas*. Used feature-based encoding to locate gene samples in the cerebellum, and *hierarchical clustering* and *PCA* to determine *organizational structure* of genetic gradients

## Predicting COVID-19 mortality rates across the U.S. using mobility and census data
